

October 8, 2021

To Whom It May Concern,

I would like to provide my recommendation of Harrison Ernst as an entry level electrical engineer. Harry worked for me as an intern for the summer of 2021 in my Project Engineering group at Triumph's Systems, Electronics and Controls operating company in West Hartford, Connecticut. He quickly became a valuable resource on my team for the time he was here.

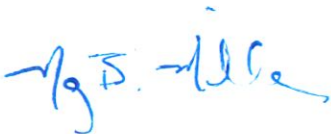

As an intern in the Project Engineering group, Harry was initially tasked with assisting the electrical engineering PEs in my group in leading their new product development teams. He was teamed up specifically with a PE working on an electronic engine control unit prototype. He experienced prototype testing in the electronics lab and was instrumental in setting up the hardware tracking system for the development of follow-on prototype units. Harry was quick to learn the team's tasks and rapidly took over a variety of the PE tasks such as leading meetings, sourcing suppliers, tracking units through production and inspection, etc.

An important part of the internships at Triumph is for the interns to get exposure to and experience in other positions within Triumph's electrical engineering group. Harry was eager to add to his experience here and worked with several different teams, performing wiring harness mapping and EMI testing, among other tasks.

A defining characteristic of Harry is his initiative. Not only was he fast in picking up new skills but he was quick to learn the company organization, its departments and functions, and who to consult to get things done. He has a "bias for action" and would figure things out on his own if specific instruction wasn't available. That, combined with his good work ethic and energy, allowed him to quickly become a contributing member of my team.

I heartily recommend Harry as an electrical engineer.

Sincerely,

**Nancy B. Miller** | Senior Manager, Project Engineering
